

Paweł Gajec

Summary

I am an optimist with an open mind who has a passion for learning new things. In my life I have undertaken various activities that on the surface will not be useful in the IT industry, but "nic bardziej mylnego :)". Acquired skills allow me to quickly adapt to the requirements of the situation, and to seek effective solutions to problems. I completed a 9-month course where I learned the basics of Java, JavaScript, CSS, HTML, frameworks Spring, Spring Boot, Angular. I gained knowledge of how to work in SCRUM methodology, and learned about tools such as Jira and Trello. In addition, I learned about Postman, Git and on my own I improve my knowledge with the basics of Docker. The course was ended with a group project. / Cauliflower repository on my GitHub. For further information please visit my website:
